COPYRIGHT & LIABILITY

The Edig@s Workgroup (EASEE-Gas Message and Workflow Design Working Group) disclaims and excludes, and any user of the Edig@s Workgroup Implementation Guidelines acknowledges and agrees to the Edig@s Workgroup disclaimer of, any and all warranties, conditions or representations, express or implied, oral or written, with respect to the guidelines or any part thereof, including any and all implied warranties or conditions of title, non-infringement, merchantability, or fitness or suitability for any particular purpose (whether or not the Edig@s Workgroup knows, has reason to know, has been advised, or is otherwise in fact aware of any such purpose), whether alleged to arise by law, by reason of custom or usage in the trade, or by course of dealing. Each user of the guidelines also agrees that under no circumstances will the Edig@s Workgroup be liable for any special, incidental, exemplary, punitive or consequential damages arising out of any use of, or errors or omissions in, the guidelines.

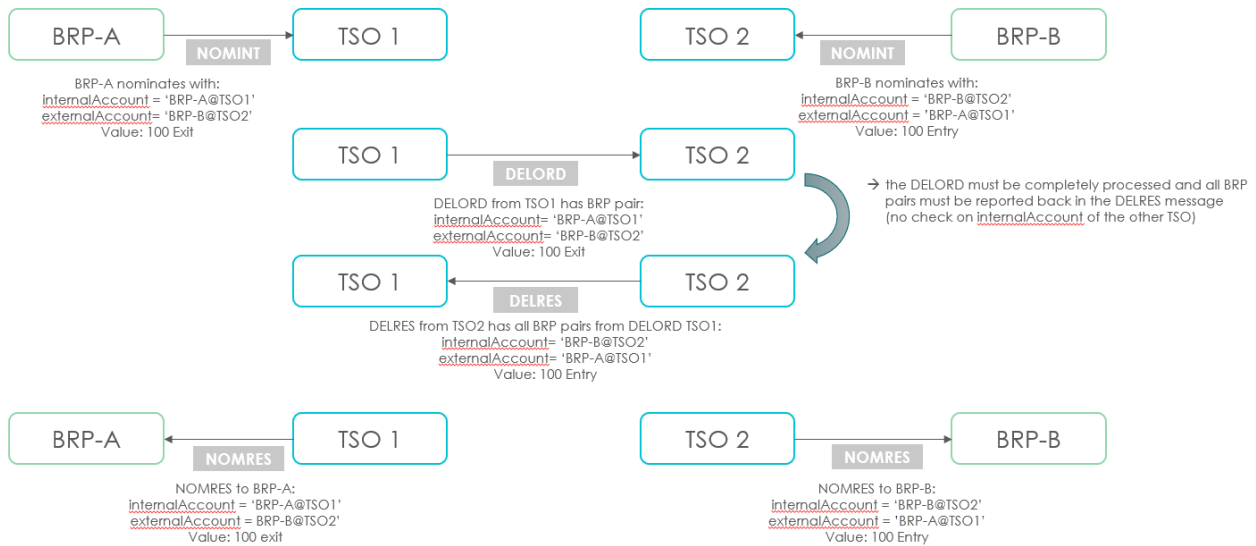

1 Validation of BRP account pairs in DELORD messages

When a TSO receives an unknown BRP pair in the DELORD message, the following best practices should be followed:

- 1) If the internalAccount in the DELORD is unknown by the receiver of the DELORD, the message must be processed, and the unknown BRP pair must be reported back in the DELRES message. No validation checks should be made by a TSO on an internalAccount of another TSO.
- 2) If the externalAccount in the DELORD is unknown by the receiver of the DELORD, the BRP pair must be ignored, the rest of the DELORD message processed and an ACKNOW issued with information regarding the unknown account(s). The receiver of the DELORD is the only one able to check his own Account codes.

See examples 1, 2 and 3 on the next pages.

1.1 Example 1 - all BRP pairs are known and matched

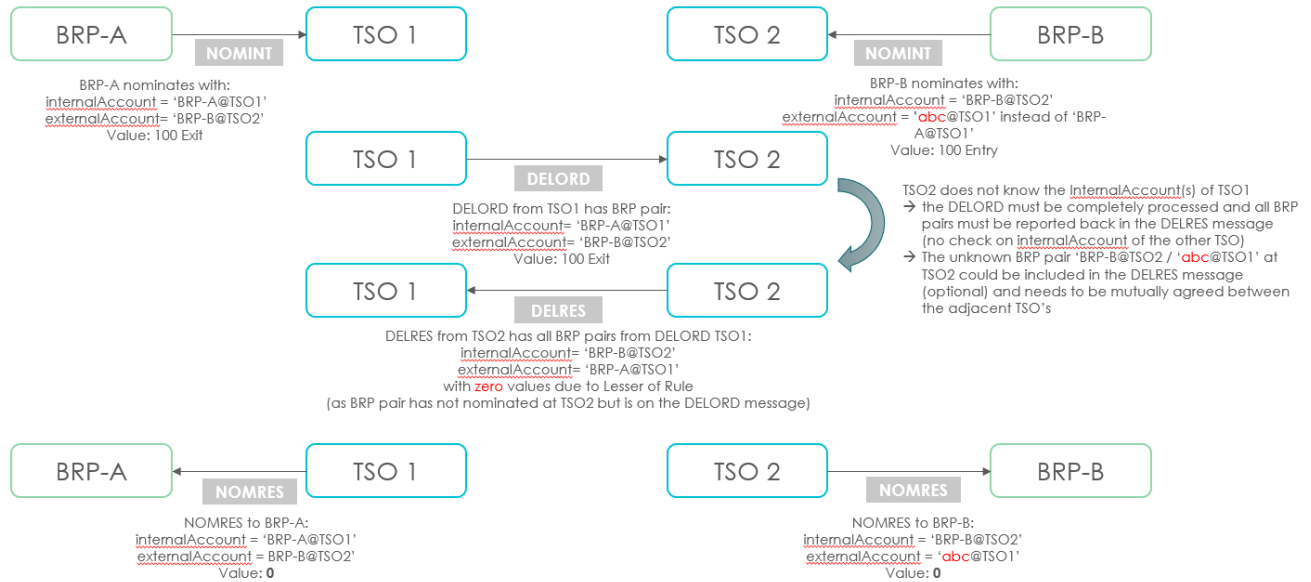

For the avoidance of doubt, the correct Accounts (relevant for all cases) are:

- BRP-A account on the TSO1 side: 'BRP-A@TSO1'
- BRP-B account on the TSO2 side: 'BRP-B@TSO2'

Rule used: Lesser of Rule

1.2 Example 2 - unknown BRP pair for TSO1 at TSO2

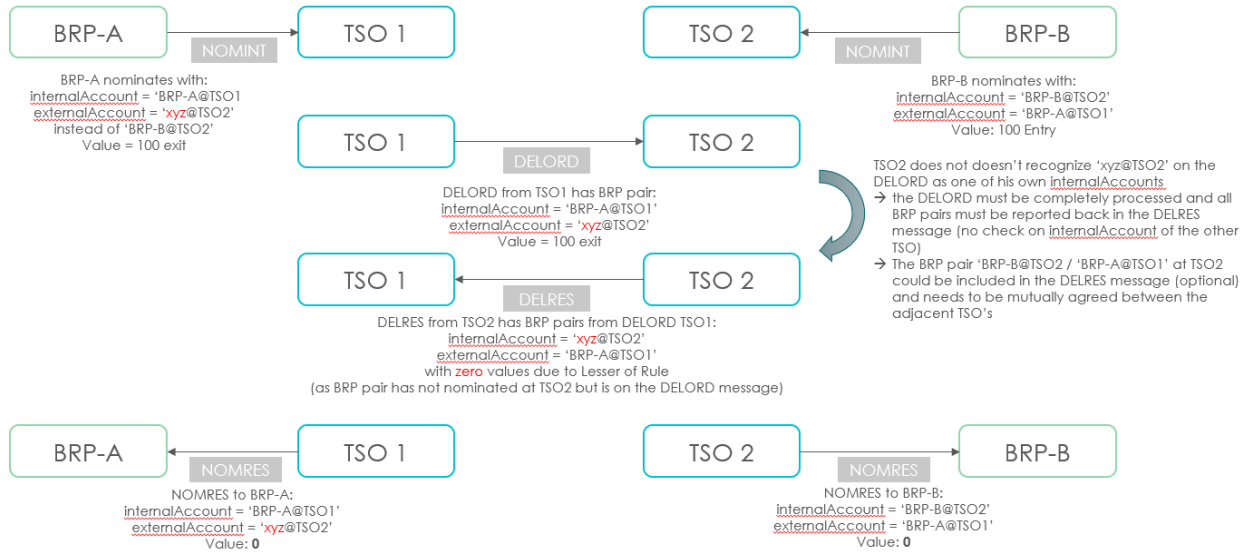

For the avoidance of doubt, the correct Accounts (relevant for all cases) are:

- BRP-A account on the TSO1 side: 'BRP-A@TSO1'
- BRP-B account on the TSO2 side: 'BRP-B@TSO2'

Rule used: Lesser of Rule

1.3 Example 3 - unknown BRP pair for TSO2 at TSO1

For the avoidance of doubt, the correct Accounts (relevant for all cases) are:

- BRP-A account on the TSO1 side: 'BRP-A@TSO1'
- BRP-B account on the TSO2 side: 'BRP-B@TSO2'

Rule used: Lesser of Rule

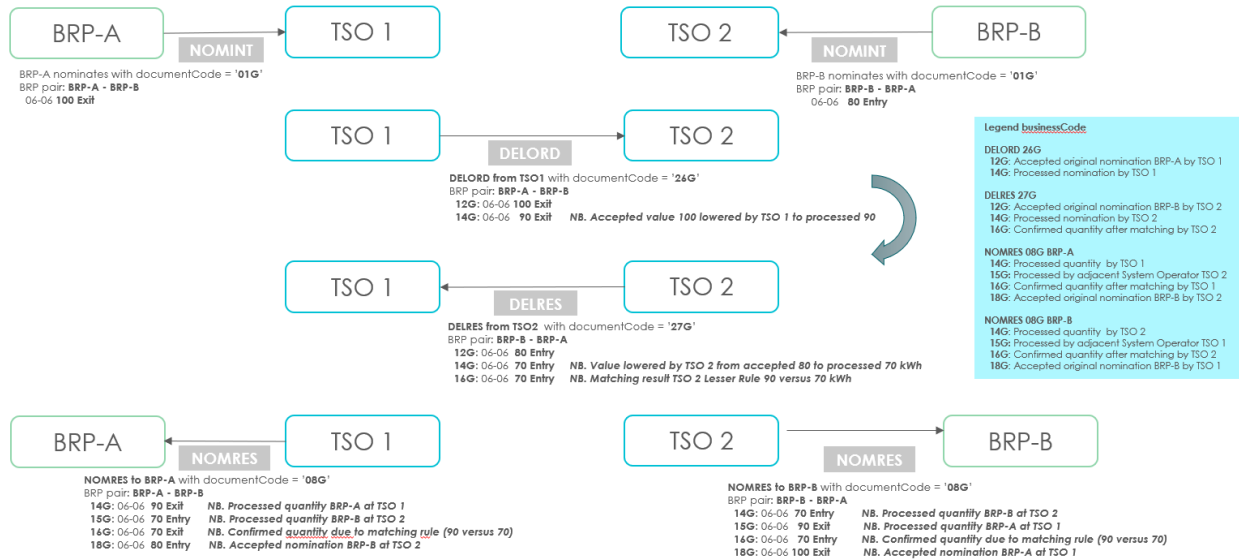

2 Usage of BusinessCodes in Nomination & Matching

The businessCodes are central in the Nomination and Matching process, and the following codes are available in Edig@s 6.1

12G	Accepted by SO. The original balancing party nomination that was accepted* by the System Operator (* with respect to the required lead-time). An accepted nomination is a qualified nomination by the Balance Responsible Party that have gone successfully through all the necessary controls and have been accepted by the System Operator. Depending on the System Operator, the result of those different controls can lead to a modification of the quantities or to a partial or complete rejection of the nomination message.
14G	Processed by SO. This status is used to define nominations from a Balance Responsible Party that may have been modified by the System Operator taking into account any physical calculation, capacity constraint, balancing obligations, etc.
15G	Processed by adjacent System Operator. This status is used to define nominations from an adjacent Balance Responsible Party that may have been modified by the adjacent System Operator taking into account any physical calculation, capacity constraint, balancing obligations, etc.
16G	Confirmed. Means the quantities of gas confirmed to be scheduled or rescheduled to flow on a gas day. The confirmed quantities will take into account processed quantities and the matching process if applicable.
18G	Counterpart nomination. The original counterpart Balance Responsible Party nomination that was accepted* by the Neighbouring System Operator or by the Area Coordinator. (*with respect to the required lead-time). An accepted nomination is a qualified nomination by the Balance Responsible Party that have gone successfully through all the necessary controls and have been accepted by the System Operator. Depending on the System Operator, the result of those different controls can lead to a modification of the quantities or to a partial or complete rejection of the nomination message.

The two examples on the next pages contains information on how to use these correctly in the Edig@s messages.

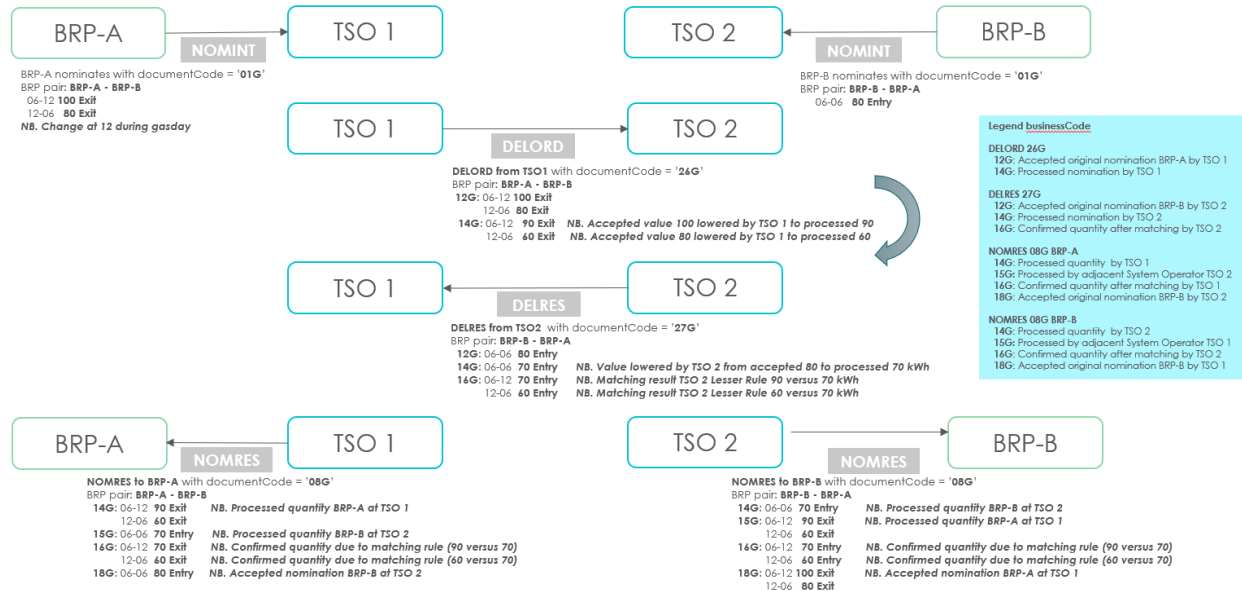

2.1 All BRP's have nominated day ahead and are confirmed

For the avoidance of doubt:

- BRP-A has an account on TSO1
- BRP-B has an account on TSO2
- Matching rule used: Lesser of Rule
- All values in kWh
- Exit in the messages will be Z03
- Entry in the messages will be Z02

2.2 BRP-A renominated during the gas day and all BRP's are confirmed

For the avoidance of doubt:

- BRP-A has an account on TSO1
- BRP-B has an account on TSO2
- Matching rule used: Lesser of Rule
- All values in kWh
- Exit in the messages will be Z03
- Entry in the messages will be Z02

3 Validation of accounts in NOMINT messages

When a System Operator receives an NOMINT message, the following best practices should be followed for validation of the accounts:

- 1) The whole message will be rejected if the internal account in the message is not valid.
- 2) For 01G double-sided nominations the messages should not be rejected based on the external account. The corresponding NOMRES should contain all the account pairs received in the NOMINT.
- 3) For 02G and 03G nominations, unknown external accounts should be ignored, the rest of the message processed. The corresponding NOMRES should not contain the unknown account pairs received in the NOMINT.
- 4) An ACKNOW message should always be sent.

4 Document Change Log

Version	Description
Version 1 2024-05-24	Initial version.
Version 2 2024-10-29	Added section 3 – Validation of accounts in NOMINT messages
